Dear Tom;

This letter is in regards to an update on the Transderm Machine from Mattioli Engineering. Our experiences thus far with the machine have been very positive! The equipment is very easy to use and the treatments have been easy to perform as well as comfortable for the patient. We have used both the water-soluble collagen and Vitamin C on patients all of whom have enjoyed outstanding results.

We feel that the technology as well as the potential of the Transderm Machine are excellent and outstanding! The idea of being able to transdermally deliver so many different products into the skin for various purposes is amazing. We are eager to hear back from Mattioli Engineering regarding any further research and information they have on this equipment.

Best regards!

Steven Gitt, M.D., F.A.C.S.
